Benjamin Espinoza

Senior Data Analyst | Business Intelligence | AI-Driven Analytics
& Prompt Engineering | SQL · Tableau · Looker | Agile Product
Development | Open to Int'l Opportunities
Santiago Metropolitan Area

Summary

Portfolio: www.benmatias.com Certifications: <https://www.credly.com/users/benmatias> I am a Senior Data Analyst and Civil Industrial Engineer with 6+ years of experience transforming complex datasets into strategic business decisions. I specialize in being an AI-Augmented Analyst: leveraging Prompt Engineering and AI Agents to accelerate the data lifecycle—from complex SQL architecture to strategic product discovery. My value proposition lies in the intersection of technical precision and business strategy. I don't just build dashboards; I design the KPI frameworks that allow companies to scale. How I leverage AI to drive efficiency: Strategic Product Discovery: I use AI agents to rapidly generate User Stories, MVP Canvas, and Flow Diagrams, reducing discovery phases and ensuring alignment in Agile squads. Advanced SQL Development: I optimize complex queries and data modeling through AI-assisted workflows, ensuring high-speed delivery of actionable insights. Data Storytelling: I build executive-level reporting ecosystems in Tableau, Power BI, and Looker that drive measurable ROI, such as reducing annual budgeting cycles from 6 to 2 months. Core Stack: • AI & Automation: Prompt Engineering for Data/Product, AI Agents for Business Analysis. • Data: Advanced SQL (Expert), LookML, dbt (Foundational), GA4. • Visualization: Tableau, Power BI, Looker / Looker Studio. • Business & Agile: User Stories, MVP Definition, KPI Strategy, Stakeholder Management. I am currently seeking new challenges in North America (Remote/Relocation) where I can apply my "AI-first" mindset to help organizations achieve business intelligence excellence. ✉️ # Let's connect or reach out at: bmatiasespinoza@gmail.com

Experience

Banco Internacional
Business Analyst

May 2023 - Present (3 years 4 months)

Santiago, Chile

I lead data and analytics initiatives within the Innovation area, bridging business, product, and data to enable data-driven decision-making and improve organizational performance.

- Designed and implemented a company-wide KPI and reporting framework from scratch, establishing visibility and performance tracking where none existed before.
- Built and maintained 20+ dashboards across Innovation, Fraud, Sales, Product, and Strategy teams, delivering insights to both operational and executive stakeholders.
- Defined KPIs and performance metrics, identifying key drivers of business outcomes and uncovering optimization opportunities.
- Implemented end-to-end analytics tracking using Google Tag Manager and Google Analytics 4 (GA4), including event design, tagging strategies, and validation processes to ensure data accuracy.
- Translated complex datasets into clear, actionable insights and compelling narratives, supporting strategic decision-making at senior levels.
- Collaborated in cross-functional agile squads (Product, IT, Business), contributing to end-to-end delivery of initiatives.
- Created user stories, defined requirements, and documented processes using Jira and Confluence.
- Designed process flows and MVP canvases to structure and prioritize new initiatives.
- Conducted functional testing (QA) to validate product features and analytics implementations prior to release.
- Automated data pipelines and managed datasets to ensure data quality, integrity, and scalability.

Lucas Diesel

Data & Business Control Analyst

September 2021 - April 2023 (1 year 8 months)

Santiago, Chile

Hired to build a new data analytics capability in a company lacking visibility due to shared financial systems with a sister company. Designed and led reporting strategy across departments, becoming the internal analytics consultant for multiple business areas.

Key Achievements:

- Created and led a company-wide data analytics function from scratch.
- Developed and delivered 30+ Power BI reports across operations, sales, inventory, procurement, and executive dashboards.
- Automated daily report delivery, saving up to 1 hour per day.
- Supported all business units with decision-making dashboards, including technical services and finance.
- Reduced annual budgeting process from 6 to 2 months through process improvement over two consecutive years.

Heavenward Ascensores - Mitsubishi Elevators

Management control analyst

November 2019 - September 2021 (1 year 11 months)

Santiago, Chile

Joined to support financial and operational visibility for modernization and maintenance projects. Built reports and dashboards to track performance and enable better customer and executive decision-making.

Key Achievements:

- Monitored KPIs and operational costs for modernization and maintenance contracts.
- Created dashboards in Excel and Power BI to improve data transparency and support strategic decisions.
- Collaborated with technical and executive teams to enhance reporting and customer insights.
- Supported financial and administrative control processes across departments.

Cenabast

Thesis Project – Public Health Procurement Analyst

March 2019 - October 2020 (1 year 8 months)

Santiago, Región Metropolitana de Santiago, Chile

Developed a supplier compliance and performance control model for Chile's national public health procurement center (Cenabast), as part of my final engineering thesis. The project aimed to reduce delivery non-compliance through improved tracking, KPI dashboards, and supplier segmentation strategies.

Servicio Civil de Chile

Data Analyst Intern – Public Management Unit

June 2019 - September 2019 (4 months)

Gran Santiago, Región Metropolitana de Santiago, Chile

Worked with the Management and Projects Unit supporting public reporting systems (SGDP). Focused on data analysis, process mapping, and regulatory compliance reporting for Chile's National Directorate of Civil Service.

Key Contributions:

- Created performance indicators and visualizations for internal compliance tracking.
- Analyzed datasets from SGDP and external sources to assess compliance with national standards.
- Modeled operational processes using Bizagi Modeler and proposed improvements.

Applus+ INGELOG

Data Analyst Intern – HR Department

March 2019 - June 2019 (4 months)

Provincia de Santiago, Chile

Supported the Human Resources department as a data analyst intern, focusing on improving internal reporting processes and database management using Excel and SQL.

Key Contributions:

- Extracted, cleaned, and analyzed HR data using Excel and SQL queries.
- Generated reports and KPIs to support HR decision-making.

- Worked with ERP Softland to validate and organize personnel data.

Cenabast

Logistics Intern – Distribution Center

January 2018 - February 2018 (2 months)

Provincia de Santiago, Chile

Supported warehouse operations with inventory control and layout optimization using AutoCAD and SAP WMS.
